Source code licenses had become very expensive and several outside parties had expressed interest in a separate release of the networking code, which had been developed entirely outside AT& T and would not be subject to the licensing requirement.. A PDP- 1 1/4 5 was bought to run the system, but for budgetary reasons, this machine was shared with the mathematics and statistics groups at Berkeley, who used RSTS, so that Unix only ran on the machine eight hours per day (sometimes during the day, sometimes during the night).. BSD from 1 98 3 included code from 4 BSD, and was the first release that was a full OS (a modified V7 Unix) rather than a set of applications and patches.. Bill Joy to co- found Sun Microsystems; Mike Karels and Marshall Kirk Mc Kusick took on leadership roles within the project from that point forward.. He helped to install Version 6 Unix and started working on a Pascal implementation for the system.. On a lighter note, it also marked the debut of BSD's daemon mascot in a drawing by John Lasseter that appeared on the cover of the printed manuals distributed by USENIX.
